SUMMARY

Senior Full-Stack Developer with 10+ years of experience in enterprise applications covering security, operations, and analytics domains. At Bell Canada's Operations Center, I built and maintained multiple production platforms for WAF management, vulnerability tracking, phishing detection, incident response, and customer service analytics — including an AI agent powered by Google Gemini enabling natural language querying over millions of interaction records. I am motivated by creating tools that help people make better decisions, faster.

SKILLS

Frontend Development

Vue.js · React · Angular · TypeScript · JavaScript · Next.js · TailwindCSS · Nanostores

Backend Development

Node.js · Python · Java · Spring Boot · Keycloak · Go · REST APIs · GraphQL

Databases

PostgreSQL · MongoDB · Elasticsearch · Redis · RabbitMQ

DevOps & Infrastructure

Docker · Kubernetes · CI/CD · Linux · IPFS · Decentralized Systems

Testing & Quality

Vitest · Jest · Cypress · Playwright · Unit Testing · End-to-End Testing

AI & LLM Development

Google ADK (Agent Development Kit) · Gemini / google-genai · LLM Tool Use & Agent Architecture · FastAPI · Prompt Engineering · SSE Streaming

WORK EXPERIENCE

Senior Full-Stack Developer at Bell Canada

Jan 2022 - Current

Full-stack development for Bell Canada's Operations Center through Talan contracting, building enterprise security and analytics platforms.

- Built INSIGHTS Agent from scratch — AI conversational agent (Google ADK + Gemini) enabling natural language querying over Bell's customer service interaction database; sole developer across architecture, tool design, API integration, and deployment
- Delivered INSIGHTS Platform end-to-end (Vue 3 + Spring Boot + Elasticsearch) — shipped YoY comparison reports, treemap visualization, MongoDB caching layer, Playwright E2E test suite, and AI chatbot integration; platform serves 1,100+ users
- Designed BFF-specific RBAC permission model (Spring Boot + Keycloak) for INSIGHTS, defining all role/scope/AD group mappings; sole owner of the permission layer across the service
- Built WAF Management UI (Vue 3 + Vitest) — implemented New Relic browser monitoring with dynamic per-environment configuration, task management module, and device cluster management
- Developed Vulnerability Management platform (Vue 2 + TypeScript) — redesigned approval bundle workflow, built exception handling with file attachment support, and shipped export pipeline fixes; primary contributor with 500+ commits

- Built Phisherman anti-phishing platform (Vue 3 + Elastic APM + Sentry) — integrated Wildfire, Symantec Threat Explorer, and URLScan.io threat intelligence feeds into the analyst UI
- Contributed to EDR and SLURP security platforms (Vue 2) — user management redesign, OS/machine type filters, SentinelOne data integration, and barcode asset tracking

Lead Front-End Web Developer at Renault Digital

Sept 2019 - Jan 2022

Led frontend development for PRISM through onepoint contracting — modular web application for automotive component definition and validation.

- Built modular architecture enabling different stakeholders (designers, engineers, procurement teams, compliance specialists) to view and validate components according to their specific needs
- Established coding standards, architectural decisions, and team development practices
- Reduced component validation time and resolved conflicts earlier in the design phase

Full-Stack Developer at Yanport

Jan 2016 - Sept 2019

Full-stack development of web applications and services providing tools for real estate professionals.

- Built platform aggregating property listings from multiple sources with advanced search, filtering, report generation, and proposal creation
- Completed AngularJS to Angular 5 migration implementing Progressive Web App capabilities and responsive design for mobile and tablet
- Developed backend systems with real-time data updates, search optimization, and crawling infrastructure

PROJECTS

Ash

Skills: TypeScript · Rust · Tauri · Waku · Tor · P2P

https://github.com/nipsysdev/Ash

P2P field coordination app supporting activism and protest movements with censorship-resistant communication.

- Winner, RealFi Hack 2025 — Resilient Activist Technology track (240 participants)
- Peer-to-peer coordination via Waku messaging network with Tor hidden service integration
- Offline map downloads and group coordination without centralized infrastructure

lsd

Skills: TypeScript · React · shadcn · Radix UI · Design System

https://github.com/nipsysdev/lsd

shadcn-based implementation of the Logos Design System — a minimalist, accessibility-first component library.

- 39 components with 185+ live examples across 15 releases
- Built on React 19 and Radix UI primitives with Tailwind CSS 4
- Published as @nipsys/lsd on npm with automated documentation

EDUCATION

Licence STS Computer Science at Lycée Le Rebours — Paris 13°

Jan 2016 - Jan 2017

BTS SIO SLAM Computer Science at Lycée Léonard de Vinci de Melun

Jan 2014 - Jan 2016

CERTIFICATES

IELTS General Training British Council

Jul 2021
