SUMMARY

Senior Full-Stack Developer with a frontend focus and over 10 years of experience building enterprise applications, particularly in the fields of security, operations, and data analysis. I also had the opportunity to design a conversational AI agent as part of an application enabling the querying and interpretation of data extracted from Bell Canada's customer service interaction database. I have 6 years of experience with Angular, 4 years with Vue.js, 6 years with Java (including 3 with Spring Boot), and 3 years with Python Django.

SKILLS

Frontend Development

Vue.js · React · Angular · TypeScript · JavaScript · Next.js · Pinia · Redux · TailwindCSS · Vite

Databases

PostgreSQL · MongoDB · Elasticsearch · Redis · RabbitMQ

Backend Development

Java · Spring Boot · Eclipse Jersey · Node.js · Python Django · Deno · Microservices · REST APIs · Rust

DevOps & Infrastructure

Docker · GitHub/GitLab CI/CD · Keycloak · Linux · IPFS · Logos stack · Self-hosting

QA & Testing

Vitest · Jest · Cypress · Playwright · Unit Testing · End-to-End Testing

AI & LLM Development

Self-hosted AI agent configuration (OpenClaw, LLM Prompt Engineering · AI agent skill development · Multi-agent orchestration · Google ADK

WORK EXPERIENCE

Senior Full-Stack Developer at Bell Canada (via Talan)

Jan 2022 - Current

At Bell Canada's Operations Center, I created and contributed to the development of various enterprise platforms in the fields of security and data analysis and visualization.

Technologies: Vue.js (versions 2 and 3), React, TypeScript, Pinia, TailwindCSS, Vite, PostgreSQL, MongoDB, Elasticsearch, Redis, Java Spring Boot, Python Django, Docker, GitLab CI/CD, Keycloak, Vitest, Jest, Cypress, Playwright, Google ADK (AI agent).

- Development of the Insights platform (Vue3/Spring Boot) — AI-powered customer service analytics platform used by over 1,100 users. Built a conversational agent from scratch, enabling natural language querying of the customer service interaction database as well as chart generation. Also developed a caching system using MongoDB (recommending a migration to Redis).
- Created the new Frontend application for the WAF management platform — Migration of the React frontend to Vue3. Features including firewall policy configuration, virtual servers, ASM signatures, telemetry, integration with F5 and backend services written in Go and Spring Boot.
- Took over development of the vulnerability management platform — Platform for tracking and remediating security vulnerabilities across Bell's entire infrastructure (Vue2/Django).
- Development of the EDR platform — Event detection and response platform for real-time coordination of security incidents with SentinelOne integration (Vue2/Spring Boot).
- Development of the new Phisherman Frontend — Phishing detection and analysis platform, integrating URLScan.io, Symantec, and Wildfire (Vue3/Django, Elasticsearch).
- Took over development of SLURP — Asset management system with barcode tracking and application health monitoring (Vue2/Django).
- Created the UCDB (Unified Configuration Database) platform with API documentation and field management (Vue3/Spring Boot).

Lead Front-End Developer at Renault Digital (via Onepoint)

Sept 2019 - Jan 2022

Led the Frontend architecture of PRISM — a modular web application for automotive component definition and validation, used by multiple stakeholder roles throughout the vehicle development lifecycle.

Technologies: Angular 8+, TypeScript, Redux, Material Design, GitLab CI/CD, Jest, Cypress.

- Built modular views for a cPDM application (Angular) — enabling designers, engineers, procurement teams, and compliance specialists to define, configure, and validate automotive components including parts, materials, and color/trim variants

- Established coding standards, architectural decisions, and development practices for the frontend team; integrated with Java/Spring Boot backend services and collaborated on API contract design
- Reduced automotive component validation cycle time by enabling parallel stakeholder reviews within a single source of truth for product data, catching design conflicts earlier in the design phase

Full-Stack Developer at Yanport

Jan 2016 - Sept 2019

Full-Stack development of property aggregation and estimation platforms for real estate professionals, providing agents and agencies with tools for market monitoring, property search, and decision support.

Technologies: Angular.js, Angular 4+, JavaScript, TypeScript, MongoDB, Elasticsearch, Java 8+, Eclipse Jersey.

- Platform aggregating property listings from over 10 sources with advanced search, filtering, report generation, and proposal creation for real estate professionals
- AngularJS to Angular 5 migration — implemented Progressive Web App capabilities, responsive design for mobile and tablet, and modernized the frontend architecture
- Developed backend services for real-time data updates, search optimization, and crawling infrastructure powering the aggregation pipeline

PROJECTS

site

Skills: TypeScript · React · Next.js · IPFS · GitHub CI · Self-hosting

<https://xav.gwei.site/>

Terminal-themed personal website, deployed on IPFS, self-hosted with bilingual FR/EN support and P2P infrastructure.

@nipsys/lsd

Skills: TypeScript · React · shadcn · Radix UI · Design System · GitHub CI

<https://lsd.nipsys.dev/>

A Shadcn-based implementation of the Logos Design System — 39 components available.

Ash

Skills: TypeScript · Rust · Tauri · Waku/Logos stack · Tor · P2P

<https://github.com/nipsysdev/Ash>

P2P field coordination hackathon proof-of-concept with censorship-resistant communication. Winner of the RealFi Hack 2025 hackathon (240 participants). Development continued through AnyMaps, a decentralized offline navigation platform with social features.

storage-rust-bindings

Skills: Rust · FFI · Logos Storage

<https://github.com/nipsysdev/storage-rust-bindings>

Rust FFI bindings for Logos Storage, a decentralized storage network.

EDUCATION

Licence Professionnelle STS Computer Science at Lycée Le Rebours — Paris 13^e

Jan 2016 - Jan 2017

BTS SIO option SLAM Computer Science at Lycée Léonard de Vinci de Melun

Jan 2014 - Jan 2016

CERTIFICATES

IELTS General Training British Council

Jul 2021

<https://www.ielts.org>

LANGUAGES

French

Native speaker

English

Bilingual
