SUMMARY

Senior Full-Stack Developer with a frontend focus and over 10 years of experience building enterprise applications in security, operations, and data analytics. Expert in building high-autonomy, output-based systems, including AI-powered customer support platforms and decentralized P2P infrastructure. I have 6 years of experience with Angular, 4 years with Vue.js, 6 years with Java (including 3 with Spring Boot), and 3 years with Python Django.

SKILLS

Frontend Development

Vue.js · React · Angular · TypeScript · JavaScript · Next.js · Pinia · Redux · TailwindCSS · Vite

DevOps & Infrastructure

Docker · GitHub/GitLab CI/CD · Keycloak · Linux · IPFS · Logos stack · Self-hosting

Databases

PostgreSQL · MongoDB · Elasticsearch · Redis · RabbitMQ

QA & Testing

Vitest · Jest · Cypress · Playwright · Unit Testing · End-to-End Testing

Backend Development

Java · Spring Boot · Node.js · Python Django · Deno · Rust · Microservices · REST APIs

AI & LLM Development

Self-hosted AI agent configuration (OpenClaw, LLM Prompt Engineering · AI agent skill development · Multi-agent orchestration · Google ADK

WORK EXPERIENCE

Senior Full-Stack Developer at Talan

Jan 2022 - Current

Senior Consultant specializing in complex enterprise architecture. Currently focusing on R&D for decentralized infrastructure and AI agent orchestration.

Senior Full-Stack Developer at Bell Canada (via Talan)

Jan 2022 - Jun 2026

At Bell Canada's Operations Center, I led full-stack development for enterprise security and analytics platforms, building mission-critical tools for data visualization and real-time monitoring.

- Development of the Insights platform (Vue3/Spring Boot) — AI-powered customer service analytics platform used by over 1,100 users. Built a conversational agent from scratch, enabling natural language querying of the customer service interaction database as well as chart generation.
- Created the new Frontend application for the WAF management platform — Migration of the React frontend to Vue3. Features including firewall policy configuration, virtual servers, and real-time telemetry integration with F5 and backend Go/Spring Boot services.
- Took over development of the vulnerability management platform — Platform for tracking and remediating security vulnerabilities across Bell's entire infrastructure (Vue2/Django).
- Development of the EDR platform — Event detection and response platform for real-time coordination of security incidents with SentinelOne integration (Vue2/Spring Boot).
- Development of the new Phisherman Frontend — Phishing detection and analysis platform, integrating URLScan.io, Symantec, and Wildfire (Vue3/Django, Elasticsearch).
- Took over development of SLURP — Asset management system with barcode tracking and application health monitoring (Vue2/Django).
- Created the UCDB (Unified Configuration Database) platform with API documentation and field management (Vue3/Spring Boot).

Lead Front-End Developer at Renault Digital (via Onepoint)

Sept 2019 - Jan 2022

Led the Frontend architecture of PRISM — a modular web application for automotive component definition and validation, used by multiple stakeholder roles throughout the vehicle development lifecycle.

- Architected the PRISM modular frontend in Angular 8+, implementing a complex Redux-driven state management system to enable parallel validation of automotive parts across a single source of truth.

- Established coding standards, architectural decisions, and development practices for the frontend team; integrated with Java/Spring Boot backend services and collaborated on API contract design.
- Reduced automotive component validation cycle time by resolving design conflicts earlier in the phase, preventing costly later-stage manufacturing changes.

Full-Stack Developer at Yanport

Jan 2016 - Sept 2019

Full-Stack development of property aggregation and estimation platforms for real estate professionals in France.

- Modernized the real estate analytics portal by migrating the frontend from AngularJS to Angular 5, improving development productivity through TypeScript, reusable components, and a more maintainable architecture.
- Engineered key components of a national-scale data pipeline to aggregate property listings across France, implementing resilient scrapers with proxy rotation and regex-based extraction to deduplicate and structure data from millions of records.

PROJECTS

Ash

Skills: TypeScript · Rust · Tauri · Waku/Logos stack · Tor · P2P

🔗 <https://github.com/nipsysdev/Ash>

Winner of the RealFi Hack 2025. Developed a censorship-resistant coordination proof-of-concept for activists, integrating Tor and the Waku P2P protocol to enable secure, decentralized communication in high-risk environments.

@nipsys/lld

Skills: TypeScript · React · shadcn · Radix UI · Design System · GitHub CI

🔗 <https://lld.nipsys.dev/>

Created an open-source implementation of the Logos Design System. Built a comprehensive, themeable, and accessible UI library using Radix UI and shadcn/ui, providing a standardized design language for decentralized applications.

storage-rust-bindings

Skills: Rust · FFI · Logos Storage

🔗 <https://github.com/nipsysdev/storage-rust-bindings>

Developed the official Rust FFI bindings for the Logos storage network (integrated into the Logos GitHub organization), enabling secure and performant interaction with decentralized storage protocols for the Rust community.

site

Skills: TypeScript · React · Next.js · IPFS · GitHub CI · Self-hosting

🔗 <https://xav.dev/>

Terminal-themed personal website, deployed on IPFS, self-hosted with bilingual FR/EN support and P2P infrastructure.

EDUCATION

Licence Professionnelle STS Computer Science at Lycée Le Rebours — Paris 13^e

Jan 2016 - Jan 2017

BTS SIO option SLAM Computer Science at Lycée Léonard de Vinci de Melun

Jan 2014 - Jan 2016

CERTIFICATES

IELTS General Training British Council

Jul 2021
